Programs Requiring Manual Review

3 programs could not be fully auto-remediated. Common reasons: Dynpro dependencies, EXEC SQL, SAPGui-specific functions, complex cross-program dependencies.

Category	Remediation Guidance	Est. Effort
Dynpro-dependent programs	Requires Fiori rewrite	8 hrs/program
EXEC SQL programs	Rewrite to ABAP SQL	4 hrs/program
SAPGui-specific functions	Replace with Fiori equivalent	6 hrs/program

GenAI Escalation Results

Programs where the AST engine found fewer than 3 deterministic changes were escalated to the GenAI router (Bedrock or Air-Gapped LLM) for deeper semantic analysis.

Metric	Value
Programs escalated from AST to GenAI	4
Escalation threshold	< 3 deterministic changes found

Section 9: Deployment Roadmap — What Remains

Stages 10-17 require a live S/4HANA target system for deployment. Below is what each stage will execute when the client provisions S/4HANA.

Stage 10: SUM/DMO Execution

Migrate4HANA will orchestrate SAP's Software Update Manager for the database conversion.

Stage 11: Code Deployment

The remediated code (shown in Section 3) will be deployed via transport requests.

Stage 12: Finance Migration

FINS_MASS_DATA_MONITOR will migrate the finance documents (mapping shown in Section 4).

Stage 13: Config Application

The extracted configuration (Section 5) will be applied to S/4HANA.

Stage 14: Role Provisioning

The mapped roles (Section 6) will be created in S/4HANA.

Stage 15: Automated Testing

The generated test scripts (Section 8) will execute against S/4HANA.

Stage 16: Go-Live Cutover

Automated cutover sequence with DMS finalization.

Stage 17: Validation

85-check scorecard across 7 dimensions.
